Research Summary

A pesticide is a chemical or biological agent designed to prevent, control, or eliminate pests that threaten agricultural crops, public health, or the environment. These pests include insects, weeds, fungi, rodents, and other organisms that can harm plants, spread diseases, or disrupt ecosystems. Pesticides are categorized into various types, such as insecticides, herbicides, fungicides, and rodenticides, based on their target organisms. While essential for enhancing crop yields, protecting food supplies, and preventing disease outbreaks, pesticides must be used responsibly to minimize environmental impact, prevent pest resistance, and ensure safety for humans, animals, and non-target species.
