Research Summary

A petrochemical catalyst is a substance that facilitates and accelerates chemical reactions in the production of petrochemicals. These catalysts are critical in various processes within the petrochemical industry, such as the production of plastics, synthetic rubbers, and other essential chemical compounds derived from crude oil or natural gas. Catalysts enable more efficient and selective reactions, improving the yield and quality of the desired products while minimizing unwanted by-products. They play a pivotal role in enhancing the overall efficiency and sustainability of petrochemical processes by enabling milder reaction conditions and reducing energy consumption, making them essential components in the production of a wide range of materials that contribute to various industries worldwide.
