### Research Summary

PFAS-free surfactants are cleaning agents or emulsifiers that do not contain per- and polyfluoroalkyl substances (PFAS), a group of man-made chemicals known for their persistence in the environment and potential health risks. These surfactants are designed to perform similar functions to traditional surfactants, such as reducing surface tension, aiding in cleaning, and facilitating the mixing of oils and water, but without the harmful effects associated with PFAS. PFAS-free surfactants are increasingly being used in a variety of applications, including personal care products, household cleaners, industrial cleaning processes, and firefighting foams, as industries and consumers seek safer, more environmentally friendly alternatives. By choosing PFAS-free options, manufacturers and consumers help reduce environmental contamination and limit exposure to substances that have been linked to health issues such as hormone disruption, cancer, and liver damage.

The major global manufacturers of PFAS-Free Surfactant include DIC Corporation, Syensqo, etc. The global players competition landscape in this report is divided into
