Research Summary

Pharmaceutical blister packaging is a form of packaging widely used in the pharmaceutical industry to protect and dispense individual doses of medications. It typically consists of a thermoformed plastic blister, often made from materials like PVC (polyvinyl chloride) or aluminum, which houses the pharmaceutical product, such as tablets or capsules. The blister is sealed with a foil or film that can be easily peeled away for easy access to the medication. Pharmaceutical blister packaging offers several advantages, including protection from external factors like moisture, light, and air, which can compromise the stability and efficacy of medications.
