Research Summary

Phenolic insulation is a type of rigid foam insulation made from phenolic resin, a synthetic polymer known for its excellent thermal properties and fire resistance. It is commonly used in construction, HVAC systems, and industrial applications due to its high insulating performance, particularly in environments requiring both energy efficiency and fire safety. Phenolic insulation has low thermal conductivity, helping to reduce heat transfer, and it is also resistant to moisture, which prevents mold and mildew growth. Additionally, it has a high level of flame resistance, emitting minimal smoke when exposed to fire, making it a preferred material for use in buildings, pipelines, and equipment where safety is a critical concern.

The major global manufacturers of Phenolic Insulation include Kingspan Group, Asahi Kasei Construction material, Sekisui Chemical, Unilin (Xtratherm), L G Hausys, Fujian Ten-lead Advanced material, Anglitemp Limited, Polyguard Products, etc. The global players competition landscape in this report is divided into three tiers.
