Research Summary

Phenylalanine is an essential amino acid, meaning that the human body cannot synthesize it and must obtain it from dietary sources. It is one of the building blocks of proteins and is crucial for various physiological functions. Phenylalanine exists in three forms: L-phenylalanine, D-phenylalanine, and DL-phenylalanine. L-phenylalanine is naturally found in foods such as meat, fish, dairy products, nuts, and seeds. It plays a vital role in the synthesis of other amino acids, neurotransmitters, and certain hormones. Additionally, phenylalanine is a precursor to tyrosine, another amino acid involved in the production of neurotransmitters like dopamine and norepinephrine. While phenylalanine is necessary for health, individuals with phenylketonuria (PKU), a genetic disorder, cannot metabolize it properly, necessitating dietary restrictions to prevent the accumulation of phenylalanine and associated health issues.

The major global manufacturers of Phenylalanine include Ajinomoto, Daesang, Kyowa, Amino, Livzon, Bafeng Pharmaceutical & Chemical Share, Amino Acid, Shijiazhuang Jirong Pharmaceutical, Jiahe Biotech, Changzhou Guanghui Food Ingredients, Haitian
