### Research Summary

A photocatalyst is a substance that can initiate and accelerate a chemical reaction when exposed to light. It achieves this by absorbing photons and promoting electron transfer processes. One of the most common applications of photocatalysts is in photocatalysis, a process where light energy is utilized to activate chemical reactions that might not otherwise occur under normal conditions. Titanium dioxide (TiO<sub>2</sub>) is a widely studied photocatalyst known for its ability to facilitate reactions like the degradation of organic pollutants in air and water when illuminated by ultraviolet or visible light. Photocatalysts are pivotal in environmental remediation, energy conversion, and various industrial processes, showcasing their potential for sustainable applications by utilizing sunlight or artificial light sources to drive chemical transformations.

The major global manufacturers of Photocatalyst include TOTO, Showa Denko, Tronox (Cristal), Tayca Corporation, ISK, BASF, Kronos, JSR Corporation, KHI, Aoinn Environmental, Dongguan Tomorrow, Kon Corporation, Chem-Well Tech, etc. The global players competition landscape in this report is divided into three tiers.
