### Research Summary

Photoresist strippers are chemicals designed to remove photoresist coatings from semiconductor wafers or other substrates after the completion of photolithography processes. During photolithography, a layer of photoresist is applied to the substrate, exposed to light through a photomask, and developed to create patterns. Photoresist strippers play a crucial role in the semiconductor manufacturing process by dissolving and removing the photoresist material, leaving behind the desired patterned features. There are different types of photoresist strippers, such as wet chemical strippers and plasma-based strippers, each tailored to specific applications and materials. The efficiency of photoresist strippers is essential for maintaining the quality and precision of the patterning process, ensuring that subsequent steps, such as etching or deposition, can be performed on a clean substrate surface.

The major global manufacturers of Photoresist Strippers include DuPont, Technic, Versum Materials, Daxin Materials, Solexir, Avantor, San Fu Chemical (Air Products), MicroChemicals, TOK TAIWAN, Chung Hwa Chemical Industrial Works, Kcashin

Technology Corporation, Chang Chun Group, etc. The global players competition landscape in this report is divided into three tiers.
