Research Summary

Phototherapy equipment refers to medical devices used in the treatment of various skin conditions through exposure to specific wavelengths of light. This therapeutic approach, known as phototherapy or light therapy, involves using ultraviolet (UV) light or other types of light to target affected areas of the skin and stimulate healing or alleviate symptoms. Phototherapy equipment may include specialized lamps, light boxes, handheld devices, or whole-body cabinets that emit controlled doses of light to treat conditions such as psoriasis, eczema, vitiligo, and jaundice in newborns. Depending on the condition being treated, phototherapy equipment may emit UVB (ultraviolet B), UVA (ultraviolet A), or narrowband UVB light, and treatments may be administered in medical clinics, hospitals, or at home under the guidance of a healthcare professional. Phototherapy is considered a safe and effective treatment option for many skin conditions, offering benefits such as reduced inflammation, improved skin texture, and enhanced healing, with minimal side effects when used appropriately.

The major global manufacturers of Phototherapy Equipment include GE Healthcare,
