### Research Summary

A light therapy system, also known as phototherapy or heliotherapy, involves the use of specific wavelengths of light to treat various medical and psychological conditions. It utilizes artificial light sources that mimic natural sunlight to stimulate biological responses in the body. Light therapy is employed to manage seasonal affective disorder (SAD), depression, sleep disorders, skin conditions like psoriasis, and even to enhance mood and energy levels. Depending on the condition being treated, individuals may sit in front of light boxes or wear specialized light-emitting devices for prescribed periods, typically in the morning. The therapy works by influencing the body's circadian rhythm and regulating hormone production, promoting a sense of well-being and overall health.
