### Research Summary

Phycobiliproteins are a class of light-absorbing pigmented proteins found in certain photosynthetic organisms, primarily in red and blue-green algae, as well as cyanobacteria. These proteins play a crucial role in the absorption of light during photosynthesis, capturing photons and transferring the energy to chlorophyll for further conversion into chemical energy. The distinctive colors of phycobiliproteins, including red, blue, and green hues, result from the presence of various pigments such as phycocyanin and phycoerythrin. Scientists have explored the potential applications of these proteins in biotechnology, fluorescent labeling, and medical research due to their unique optical properties. Additionally, phycobiliproteins have been studied for their antioxidant and anti-inflammatory properties, making them of interest in the development of functional foods and nutraceuticals.

The major global manufacturers of Phycobiliprotein include DIC Corporation, King Dnarmsa Spirulina, Zhejiang Binmei Biotechnology, Parry Nutraceuticals, Nan Pao International Biotech, Japan Algae, Wuli Lvqi, Ozone Naturals, Norland Biotech, etc.
