### Research Summary

Phytosterols, also known as plant sterols, are naturally occurring compounds found in the cell membranes of plants. Structurally similar to cholesterol, phytosterols can be found in various plant-based foods such as fruits, vegetables, nuts, and seeds. The most common types of phytosterols include beta-sitosterol, campesterol, and stigmasterol. One notable characteristic of phytosterols is their ability to compete with cholesterol absorption in the human digestive system. When consumed, phytosterols can help lower low-density lipoprotein (LDL) or 'bad' cholesterol levels, making them a beneficial dietary component for managing cardiovascular health. Due to their cholesterol-lowering properties, phytosterols are often incorporated into functional foods, spreads, and supplements designed to support heart health.

The major global manufacturers of Phytosterols include Raisio, BASF, ADM, Bunge, DuPont, Cargill, Arboris, DRT, Gustav Parmentier, Enzymotech, Fenchem, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold

a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
