Research Summary

PI film, short for polyimide film, is a type of high-performance polymer film known for its exceptional thermal stability, mechanical strength, and chemical resistance. It is derived from the polymerization of aromatic dianhydrides and diamines, resulting in a highly stable and durable material. PI film exhibits outstanding thermal resistance, with a continuous operating temperature range typically exceeding 200°C (392°F) and short-term exposure capabilities beyond 400°C (752°F). This makes it suitable for use in harsh environments where extreme temperatures are encountered. Additionally, PI film has excellent mechanical properties, including high tensile strength, flexibility, and tear resistance, allowing it to withstand mechanical stress and deformation. Its chemical resistance makes it resistant to most solvents, acids, and bases. PI film is widely used in various industries, including electronics, aerospace, automotive, and medical, for applications such as flexible printed circuits (FPCs), insulating materials, heat-resistant tapes, and protective coatings, among others. Its versatility and performance characteristics make PI film a critical material for demanding applications where reliability and durability are paramount.

The major global manufacturers of PI Film include DuPont, Kaneka, PI Advanced Materials, Ube, Taimide Tech, I.S.T Corp, Rayitek, Tianyuan, Huaqiang, Jiangsu Yabao, Kying, Yunda Electronic Materials, Wanda Cable, Shanghai Qianfeng, Goto, Anhui Guofeng, Boying Jinggong, HiPolyking, etc. The global players competition landscape in this report is divided into three tiers.
