### Research Summary

Pigments are colored substances that impart color to other materials through selective absorption and reflection of light. They can be natural or synthetic and are widely used in various applications, such as art, cosmetics, textiles, and coatings. Natural pigments are derived from plants, minerals, or animals, while synthetic pigments are chemically produced. The color of a pigment is determined by the specific wavelengths of light that it absorbs and reflects. Pigments are often dispersed in a carrier, like paint, ink, or plastic, to create a colored product. In addition to providing visual appeal, pigments can serve functional purposes, such as UV protection or corrosion resistance in coatings.
