Research Summary

Pipe coating is a protective layer applied to pipes to enhance their durability, longevity, and resistance to corrosion or other environmental factors. This coating serves as a barrier between the pipe material and external elements, preventing degradation and extending the life of the pipes. Various types of pipe coatings exist, including fusion-bonded epoxy (FBE), polyethylene, polypropylene, and bituminous coatings, each chosen based on the specific application, the type of pipe material, and the environmental conditions the pipes will encounter. Pipe coatings are widely used in industries such as oil and gas, water and wastewater, and infrastructure development to protect pipelines from corrosion, abrasion, and chemical exposure, ensuring the integrity and reliability of the pipelines over time. The coating process involves surface preparation, application of the coating material, and curing or drying to create a durable protective layer on the pipe surface.

The major global manufacturers of Pipe Coating include Akzonobel, DuPont, BASF SE, LyondellBasell, Arkema, Covestro AG, PPG Industries, Valspar, 3M, The Bayou Companies, Axalta Coating Systems, Celanese Corporation, Nippon Paint, Sherwin-
