### Research Summary

Pipeline strainers are essential filtration devices used in pipelines to remove unwanted particles, debris, and contaminants from flowing fluids. These strainers play a crucial role in protecting downstream equipment, such as pumps, valves, and meters, by preventing the entry of solid particles that could cause damage or disruption to the system. Pipeline strainers are available in various configurations, including Y-type, basket, and duplex strainers, each designed to suit specific applications and flow conditions. Y-type strainers have a compact design and are suitable for smaller pipelines, while basket strainers and duplex strainers are employed in larger pipelines where continuous operation is required. These strainers are commonly used in industries such as oil and gas, water treatment, and chemical processing, where maintaining the purity and integrity of the flowing fluids is essential for the efficient and reliable operation of the overall system.

The major global manufacturers of Pipeline Strainers include Eaton Filtration, Parker Hannifin Corporation, Krone Filbertechnik, Filter Specialists, Watts Water Technologies,
