Research Summary

Piperylene is a hydrocarbon compound classified as a conjugated diene due to its structure, which contains two double bonds in conjugation. It is a colorless liquid with a distinct odor and is commonly produced during the cracking of petroleum or by steam cracking of naphtha. Piperylene has applications in the production of synthetic rubber, where it is copolymerized with other monomers like styrene and butadiene to create elastomers with specific properties. Its polymerization leads to the formation of polymers known for their resilience and flexibility, making them valuable in the manufacturing of tires, hoses, and various rubber products. Piperylene is also utilized in the synthesis of specialty chemicals and fragrance compounds due to its conjugated double bond system, contributing to its significance in both the rubber and chemical industries.

The major global manufacturers of Piperylene include Sinopec, Formosa Chemical, Zeon, LOTTE Chemical, Eastman, LyondellBasell, Mitsui, Shell, Ningbo Jinhai, Chenguang Chemical, Braskem, Shandong Yuhuang Chemical, YNCC, Nanjing Yuangang, etc. The global players competition landscape in this report is divided into
