### Research Summary

A piston compressor, also known as a reciprocating compressor, is a type of mechanical device used to compress gases. It operates on the principle of a piston within a cylinder, where the piston moves back and forth to compress the gas. During the compression process, the piston's forward movement reduces the volume of the gas, causing an increase in pressure. This compressed gas is then released through an outlet valve. Piston compressors are commonly employed in various industrial applications, such as in air conditioning systems, refrigeration, and pneumatic tools. They come in both lubricated and oil-free designs, and their versatility makes them suitable for tasks ranging from small-scale applications to large industrial processes, where the need for high-pressure gas compression is essential.

The major global manufacturers of Piston Compressor include Ariel, Siemens, GE, Atlas Copco, Burckhardt Compression, Howden, Ingersoll Rand, Hitachi, Kobelco, Shenyang Yuanda, Neuman & Esser, Gardner Denver, Shenyang Blower, Sundyne, Atelier Francois, ABC COMPRESSORS, KAESER, Mayekawa, Corken, Fusheng, etc. The
