Research Summary

A piston ring is a circular component fitted around the outer diameter of a piston in an internal combustion engine. It serves a crucial role in maintaining a proper seal between the piston and the cylinder wall. Piston rings help prevent the combustion gases in the cylinder from leaking into the crankcase and ensure efficient energy transfer from the expanding gases to the crankshaft. Typically made of materials such as cast iron or steel, piston rings undergo significant heat and pressure during engine operation. There are various types of piston rings, including compression rings, which seal the combustion chamber, and oil control rings, which regulate the distribution of oil on the cylinder walls. Proper functioning piston rings are essential for optimal engine performance, minimizing friction, controlling oil consumption, and maintaining airtight conditions within the combustion chamber.

The major global manufacturers of Piston Ring include MAHLE, Tenneco, Riken Corporation, NPR, Anhui Ring New Group, TPR, ASIMCO ShuangHuan, Shriram Pistons & Rings, Yoosung Enterprise, Feiyan Piston Ring, Hastings, Samkrp Pistons And Rings, Hua Min Nan Pei Group, IP Rings, Grant Piston Rings, etc. The global
