Research Summary

Plant-based hemostat powder refers to a type of hemostatic agent derived from natural plant sources and used to promote blood clotting and control bleeding during surgical procedures or in cases of traumatic injuries. These hemostatic powders are typically made from plant-based materials such as cellulose, alginate, chitosan, or other plant-derived compounds that possess hemostatic properties. When applied to a bleeding wound or surgical site, the powder interacts with blood components to accelerate the clotting process, forming a seal or clot that helps staunch bleeding and promote tissue healing. Plant-based hemostat powders are often biocompatible, biodegradable, and non-toxic, making them suitable for use in various medical and surgical settings. They are commonly used in surgeries, dental procedures, trauma care, and emergency medicine to control bleeding effectively and reduce the risk of excessive blood loss and complications. Additionally, plant-based hemostat powders may offer advantages such as ease of use, rapid hemostasis, and reduced risk of allergic reactions compared to traditional hemostatic agents derived from animal or synthetic sources.

The major global manufacturers of Plant based Hemostat Powder include Ethicon, Baxter, BD, Biocer, Hemostasis, Grena, PlantTec Medical GmbH, Starch Medical, Theracion Biomedical, Singleclean, etc. The global players competition landscape in this report is divided into three tiers.
