Research Summary

Plant biostimulators are substances or formulations applied to plants with the aim of enhancing their growth, development, and overall health. These biostimulators do not provide direct nutrients but rather stimulate physiological processes within plants, promoting nutrient uptake, stress tolerance, and metabolic activities. Plant biostimulators can include various compounds such as amino acids, seaweed extracts, humic acids, and certain microorganisms. The application of biostimulators is particularly relevant in agriculture, where they are used to improve crop yields, enhance resistance to environmental stressors, and optimize nutrient utilization. The goal is to foster more robust and resilient plants, leading to increased productivity and sustainability in agricultural practices. The use of plant biostimulators aligns with the broader trend in sustainable and eco-friendly agricultural approaches aimed at minimizing the reliance on chemical inputs while maximizing crop performance.

The major global manufacturers of Plant Biostimulators include Biolchim, Valagro, Isagro, SICIT Group, Bioiberica, Hello Nature, Biovert, TIMAC AGRO, Tradecorp,
