### Research Summary

Plant growth regulators (PGRs), also known as plant hormones or phytohormones, are naturally occurring or synthetic compounds that influence various aspects of plant growth and development. These chemical messengers regulate processes such as cell elongation, cell division, flowering, fruit development, and responses to environmental stimuli. The major classes of plant hormones include auxins, gibberellins, cytokinins, abscisic acid, and ethylene. Each hormone has specific functions, and their interactions orchestrate the overall growth and adaptation of plants to changing conditions. PGRs are extensively used in agriculture and horticulture to manipulate plant growth, control flowering, improve fruit quality, and enhance crop yield. By understanding and applying plant growth regulators, researchers and growers can optimize plant growth responses to achieve desired outcomes in terms of crop production, plant architecture, and stress tolerance.

The major global manufacturers of Plant Growth Regulators include Valent, Fine Americas, Syngenta, FMC, Bayer CropScience, DuPont, GroSpurt, Basf, Amvac,
