Research Summary

Plant protein hydrolysates are derived from plant proteins through a process called hydrolysis, wherein proteins are broken down into smaller peptides and amino acids by enzymatic or chemical treatment. This hydrolysis process results in a mixture of peptides of varying lengths. Plant protein hydrolysates are valued for their improved digestibility and bioavailability compared to intact proteins, as the breakdown of proteins into smaller fragments may facilitate easier absorption in the digestive system. These hydrolysates find applications in the food and beverage industry, particularly in the formulation of products such as protein shakes, nutritional supplements, and functional foods. Additionally, plant protein hydrolysates are used in agriculture as bio-stimulants to enhance plant growth, nutrient uptake, and stress tolerance. The versatility of plant protein hydrolysates makes them a valuable ingredient with potential benefits for both human nutrition and plant health.

The major global manufacturers of Plant Protein Hydrolysates include Abbott Nutrition, Koninklijke DSM, Kerry Group, Frieslandcampina, Arla Foods, Tate & Lyle, Archer
