Research Summary

Plastic cores are cylindrical or tubular structures made from various plastic materials, commonly polyethylene or polypropylene, and they are utilized as central support or winding components in various industries. These cores are designed to provide stability and strength to materials like paper, film, fabric, or other flexible products that are wound around them. Plastic cores are lightweight, durable, and resistant to moisture and chemicals, making them suitable for applications in the paper and textile industries, as well as in the manufacturing of tapes, films, and labels. Their versatility lies in their ability to be customized in terms of diameter, length, and wall thickness to accommodate different winding requirements. Plastic cores play a crucial role in maintaining the integrity of wound materials during storage, transportation, and processing, contributing to efficient manufacturing processes across multiple sectors.

The major global manufacturers of Plastic Cores include Fusion Tech International, PBS Plastics, Sonoco, Double-H Boots, Magaplast, Condale Plastics, Northcore Industries, Plastech Packaging & Healthcare, Available Plastics, Mossberg Industries, Nordell, Shanghai Yiding Plastic Product Co, Scandia Plastics, SYCDA, DPO Plastic,
