Research Summary

Plastic cutlery refers to eating utensils made from various plastic materials, such as polypropylene or polystyrene, commonly used for convenient and disposable food service. Plastic cutlery includes items like forks, knives, spoons, and stirrers, which are lightweight, cost-effective, and often chosen for their convenience in situations where washing and reusing traditional cutlery may not be practical. While widely used in fast-food restaurants, takeout services, and events, plastic cutlery has faced increasing scrutiny due to its environmental impact. Single-use plastic cutlery contributes to plastic pollution, and efforts to address these concerns include the promotion of more sustainable alternatives like compostable or biodegradable options. The debate around the environmental impact of plastic cutlery has led to increased awareness and initiatives encouraging the reduction of single-use plastics in favor of more eco-friendly choices.
