Research Summary

Plastic drag chains, also known as cable carriers or energy chains, are protective and guiding systems used in machinery and automation to manage and guide cables, hoses, and other flexible lines. These chains are typically constructed from durable plastic materials, such as polyamide or polypropylene, and feature interconnected links that form a flexible chain-like structure. The purpose of plastic drag chains is to prevent damage to cables and hoses from external factors such as abrasion, debris, and harsh environments, while also providing a guided path for smooth and controlled movement. They are commonly used in applications such as CNC machines, robotics, and automated manufacturing systems, where precise and reliable cable management is essential. The plastic construction makes these chains lightweight, resistant to corrosion, and suitable for a variety of industrial settings.

The major global manufacturers of Plastic Drag Chains include Igus, Tsubaki Kabelschlepp, Dynatect, Brevetti Stendalto, Hennig Inc., HELUKABEL, Murrplastik Systems, Hebei Ruiao, Conductix-Wampfler, CKS Carrier Cable Systems, Hebei
