Research Summary

Plastic eyeglass lenses are lenses made from various types of plastic materials, such as polycarbonate, CR-39, and high-index plastics. These lenses are lightweight, impact-resistant, and offer excellent optical clarity, making them popular choices for eyeglasses. Polycarbonate lenses are particularly known for their durability and are often used in sports glasses and safety glasses due to their impact resistance. CR-39 lenses, made from a type of plastic called allyl diglycol carbonate, are lightweight and provide good optical quality, making them suitable for everyday eyewear. High-index plastic lenses are thinner and lighter than traditional plastic lenses, making them ideal for people with strong prescriptions who want thinner and lighter lenses. Plastic lenses can also be coated with various treatments such as anti-reflective, scratch-resistant, and UV-blocking coatings to enhance their performance and durability. Overall, plastic eyeglass lenses offer a comfortable and functional solution for vision correction.
