Research Summary

Plastic films and sheets are thin, flexible materials made from various polymer resins, including polyethylene, polypropylene, and polyester. These materials are widely used for packaging, printing, and industrial applications. Plastic films are typically characterized by their transparency, flexibility, and protective properties, serving as barriers against moisture, gases, and contaminants. Plastic sheets, on the other hand, are thicker and can be semi-rigid or rigid, finding applications in signage, displays, and construction. Both films and sheets can be manufactured through processes like extrusion or calendaring, allowing for a wide range of thicknesses, colors, and surface finishes.
