Research Summary

Plastic pre-filled syringes are medical devices that consist of a plastic barrel and plunger pre-filled with a specific dosage of medication, typically liquid drugs or vaccines. These syringes are designed for single-use and are pre-assembled and sterilized, offering a convenient and ready-to-use solution in healthcare settings. The plastic construction of these syringes, often made from materials like polypropylene or cyclic olefin copolymer, provides advantages such as compatibility with a wide range of medications, reduced risk of breakage compared to glass syringes, and improved safety features.
