Research Summary

A plate falling film evaporator is a type of heat exchanger used for the concentration of liquids through evaporation. In this system, liquid flows as a thin film down vertical plates, and steam or another heating medium is passed through the plates to provide the necessary heat for evaporation. The falling film design allows for efficient and uniform heat transfer, resulting in high evaporation rates. The plates are typically corrugated to enhance turbulence and promote thin film formation. Plate falling film evaporators are commonly employed in the food and beverage industry for the concentration of fruit juices, dairy products, and other liquid foods, as well as in the chemical and pharmaceutical industries for the concentration of various solutions. The efficient heat transfer, compact design, and ease of scalability make plate falling film evaporators popular for processes requiring the concentration or separation of liquids.

The major global manufacturers of Plate Falling Film Evaporator include SPX Flow, GEA Group, Andritz, Sumitomo SHI FW, Shanghai Senon, GIG Karasek, Schrader, Hanpu Mechanical Technology, BMA, Rosenblad Design Group, Qingdao Conqinphi,
