### Research Summary

Plates and screws are common orthopedic devices used in surgical procedures to stabilize fractured or damaged bones. The plates are typically made of stainless steel or titanium and come in various shapes and sizes to match the anatomy of the bone. Screws, also made of similar materials, are used to secure the plate to the bone, providing stability and support during the healing process. This hardware is utilized in orthopedic surgeries such as fracture fixation, joint reconstruction, and spinal fusion. The plates and screws act as internal fixation devices, maintaining proper alignment of fractured bones and facilitating the healing process. Over time, these implants may either remain in the body or be removed after the bone has sufficiently healed. The choice of specific plates and screws depends on factors such as the type and location of the fracture, the patient's anatomy, and the surgeon's judgment.

The major global manufacturers of Plates and Screws include Johnson & Johnson, Stryker, Zimmer Biomet, Smith & Nephew, Acumed, Medartis, OsteoMed, Globus Medical, Orthofix, BBraun, MicroPort, aap Implantate, Double Medical Technology, etc.
