### Research Summary

Plating equipment refers to machinery and tools used in electroplating processes, a technique employed to coat objects with a thin layer of metal. The equipment is designed to facilitate the application of a metal coating onto a substrate through the use of an electrolytic bath. Common plating metals include chromium, nickel, copper, and gold. Plating equipment typically includes tanks or baths containing metal solutions, power supplies, and electrodes. Objects to be plated, known as the workpieces, are submerged in these baths along with the metal to be plated onto them. The power supply creates an electric current, causing the metal ions in the solution to adhere to the surface of the workpiece, forming a thin and uniform metal coating. Plating equipment is widely used in industries such as automotive, electronics, and jewelry for enhancing corrosion resistance, improving conductivity, or providing decorative finishes to various objects.

The major global suppliers of Plating Equipment include Atotech, EEJA, Dongguan UCE Group, Kunshan Dongwei Technology, George Koch Sons, PAT, PAL, Commend

Machinery, AEL, TKC Co., Ltd, Jastech, KOVOFINIS, JCU, Technic Inc, Besi, Gangmu Machinery, etc. The global players competition landscape in this report is divided into three tiers.
