### Research Summary

A platinum crucible is a laboratory vessel made from platinum, a precious and corrosion-resistant metal, used for high-temperature applications such as sample preparation and chemical analyses. Platinum crucibles are preferred in situations where other materials might react with or contaminate the sample, as platinum is inert and does not readily react with most substances. The crucible's high melting point and thermal stability make it suitable for processes involving extreme temperatures, such as fusion, combustion, and high-temperature reactions. These crucibles find application in various scientific fields, including chemistry, metallurgy, and materials science, where precision and purity in sample handling are crucial. While platinum crucibles are durable and resistant to corrosion, they are also expensive, and their use is often reserved for specific applications where their unique properties are indispensable.

The major global manufacturers of Platinum Crucible include Tanaka, Heraeus, XRF Scientific, Johnson Matthey, NETZSCH, Cole-Parmer, Thermo Fisher Scientific, Mettler Toledo, Sigma-Aldrich, 8853 S.p.A., Huaxia Furun, Nickel-Electro, Xiyu, Stanford
