Research Summary

PLC (Planar Lightwave Circuit) Fiber Optical Splitters are optical devices used in fiber optic communication networks to divide or split an incoming optical signal into multiple output signals. PLC splitters utilize a flat, waveguide-based design to achieve efficient and even splitting of optical signals. The term 'planar' refers to the flat and compact nature of the integrated optical circuit. These splitters are commonly used in Passive Optical Networks (PONs) to distribute signals from a single optical fiber to multiple end-users. PLC splitters offer advantages such as high reliability, low insertion loss, and uniform splitting ratios across different wavelengths. They play a crucial role in facilitating the deployment of optical communication systems, enabling the efficient sharing of optical signals for applications like broadband internet access and telecommunications.

The major global manufacturers of PLC Fiber Optical Splitters include Tianyisc, Browave, Broadex Technologies, NTT Electronics Corporation (NEL), Henan Shijia Photons Tech, Wuxi AOF, Wooriro, PPI, FOCI Fiber Optic Communications,
