Research Summary

Pleated membrane cartridges are filtration devices commonly used in water treatment and purification processes. These cartridges combine the advantages of pleated filter technology with the filtration capabilities of membrane materials, such as polyethersulfone (PES) or polypropylene. The pleated design increases the surface area available for filtration, while the membrane provides fine filtration to remove particles, microorganisms, and contaminants from liquids. This combination enhances the cartridges' efficiency and dirt-holding capacity, making them suitable for a wide range of applications, including pharmaceutical manufacturing, food and beverage processing, and water treatment in industrial and residential settings. Pleated membrane cartridges are available in various pore sizes and configurations to address specific filtration requirements, providing reliable and consistent performance in diverse liquid filtration applications.

The major global manufacturers of Pleated Membrane Cartridges include Merck Millipore, Pall Corporation, Sartorius Group, 3M, SUEZ, Sterlitech Corporation, Graver
