Research Summary

A pleated membrane filter is a type of filtration device that combines the benefits of pleated filter design with membrane technology for efficient particle and contaminant removal. Typically constructed with materials like polyethersulfone (PES), polypropylene, or other membrane materials, these filters feature a pleated structure that increases the available filtration surface area. The membrane component provides fine filtration, effectively capturing particles, microorganisms, and impurities from liquids. This design enhances the filter's dirt-holding capacity and overall filtration efficiency. Pleated membrane filters are commonly used in applications such as water purification, pharmaceutical manufacturing, biotechnology, and food and beverage processing, where precise and reliable filtration is essential for maintaining product quality and process integrity. The filters are available in various pore sizes and configurations to accommodate different applications and ensure optimal performance in removing contaminants from liquids.

The major global manufacturers of Pleated Membrane Filter include Merck Millipore,
