Research Summary

Pleuromutilin is a class of antibiotics derived from the fungus *Pleurotus mutilus*. These antibiotics, including drugs such as retapamulin and lefamulin, are used to treat bacterial infections, particularly those caused by Gram-positive bacteria like *Staphylococcus aureus* and *Streptococcus pneumoniae*. Pleuromutilins work by inhibiting bacterial protein synthesis, disrupting the ability of bacteria to grow and replicate. They are often used topically for skin infections or systemically for respiratory tract infections, where they have demonstrated effectiveness against antibiotic-resistant strains. Pleuromutilin antibiotics offer a valuable option in the treatment of various bacterial infections, especially in cases where other antibiotics may be less effective due to resistance or adverse effects.

The major global manufacturers of Pleuromutilin include Sunny Biotech, Hebei Weiyuan, Shandong Shengli, Shandong Lukang, Qingdao Dierman, Qilu Pharma, Huvepharma, Novartis, Vethellas, Elanco, etc. The global players competition landscape in this report is divided into three tiers.
