### Research Summary

PLGA, or poly(lactic-co-glycolic acid), is a biodegradable and biocompatible polymer widely used in the field of biomedical and pharmaceutical research. It is a copolymer composed of lactic acid and glycolic acid monomers. PLGA is known for its versatility and ability to degrade into non-toxic byproducts, making it suitable for various applications such as drug delivery systems, tissue engineering, and medical implants. The degradation rate of PLGA can be tailored by adjusting the ratio of lactic acid to glycolic acid, allowing for controlled release of encapsulated drugs or therapeutic agents. PLGA nanoparticles, microparticles, and scaffolds are commonly employed in drug delivery to enhance the efficacy and safety of pharmaceuticals. The biocompatibility and tunable properties of PLGA contribute to its widespread use in the development of innovative solutions for controlled drug release and tissue regeneration within the biomedical field.

The major global manufacturers of PLGA include Evonik, PCAS, Purac Biomaterials, Mitsui Chemicals, SDSYXS, Jinan Daigang Biomaterial, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises
