Research Summary

Pneumatic fenders are specialized maritime safety devices designed to protect ships and berthing structures from impact damage during the process of docking or mooring. These fenders consist of an outer rubber layer and an inner air chamber, creating a pneumatic or air-filled structure. When a ship comes into contact with a pneumatic fender, the compressed air inside absorbs and dissipates the kinetic energy generated by the impact, preventing damage to both the vessel and the infrastructure. Pneumatic fenders are known for their high energy absorption, low reaction force, and versatility in adapting to various vessel sizes and berthing conditions. Widely used in ports, shipyards, and offshore applications, pneumatic fenders play a crucial role in enhancing maritime safety and protecting valuable assets from collisions and abrasions during ship maneuvering.

The major global manufacturers of Pneumatic Fenders include Trelleborg, Yokohama, Palfinger, ShibataFenderTeam, Sumitomo Rubber, Anchor Marine, Shandong Nanhai Airbag, JIER Marine, Evergreen, Qingdao Tiandun, Hiview Marine Supplies, Jiangyin
