Research Summary

Point-of-care (POC) or rapid diagnostics refer to medical tests and diagnostic procedures conducted at or near the location where patient care is provided, allowing for immediate results without the need for samples to be sent to a centralized laboratory. These tests are designed for quick and often on-site analysis, enabling healthcare professionals to make immediate decisions about patient treatment and management. POC diagnostics are crucial in various medical settings, including emergency rooms, clinics, and doctor's offices, providing timely information for conditions such as infectious diseases, diabetes, cardiac markers, and pregnancy. The rapid turnaround time of POC tests contributes to more efficient patient care, facilitating prompt intervention and reducing the time between diagnosis and treatment.
