Research Summary

Poly carboxylate polymer, or polycarboxylate superplasticizer, is a type of high-performance concrete admixture widely used in the construction industry. This polymer is designed to enhance the workability and flow properties of concrete mixtures while maintaining high strength and durability. Poly carboxylate polymers consist of a main chain with carboxylic acid side groups, and they are typically synthesized through a controlled radical polymerization process. When added to concrete mixes, these polymers disperse the cement particles more effectively, reducing the water content needed for proper workability. The result is improved fluidity and ease of placement, making it particularly valuable in the production of high-strength and high-performance concrete. Poly carboxylate polymers are known for their ability to provide prolonged workability retention, even in challenging environmental conditions. Their use contributes to the production of more sustainable and eco-friendly concrete by allowing for reduced water-cement ratios and enhancing overall construction efficiency.

The major global manufacturers of Poly Carboxylate Polymer include SIKA, Arkema,

BASF, Grace, Fosroc, KAO, Mapei, Euclid Chemical, Takemoto, Nippon Shokubai, Lonsen, Oriental Yuhong, SOBUTE, Zhejiang Longsheng Group, Liaoning Kelong, KZJ New Materials Group, Sansheng Special Building Material, ARIT, etc. The global players competition landscape in this report is divided into three tiers.
