Research Summary

Polybutylene succinate, often abbreviated as PBS, is a biodegradable and bio-based thermoplastic polymer derived from renewable resources. It is part of the family of aliphatic polyesters and is known for its biocompatibility and biodegradability, making it a sustainable alternative to conventional petroleum-based plastics. PBS is used in various applications, including packaging materials, agricultural films, and as a component in biodegradable blends and composites. Its properties, which include good processability, mechanical strength, and resistance to moisture, have made it a suitable choice for environmentally friendly plastic products. PBS can break down in the presence of microorganisms and environmental conditions, contributing to reduced plastic waste and environmental impact.
