Research Summary

Polycaprolactone diol is a type of polyester diol derived from the polymerization of ϵ -caprolactone monomers. This diol form of polycaprolactone is characterized by its bifunctional nature, featuring hydroxyl end-groups. The molecular structure of polycaprolactone diol imparts flexibility, low melting points, and good solubility in various organic solvents. These properties make it a valuable component in the synthesis of polyurethanes, elastomers, and other specialty polymers. Polycaprolactone diol is often used as a soft segment in polyurethane formulations, contributing to the flexibility and durability of the resulting materials. Its ability to undergo chemical modification and blend with other polymers further enhances its versatility in applications such as coatings, adhesives, sealants, and biomedical materials, where a balance of mechanical properties and biocompatibility is desired.

The major global manufacturers of Polycaprolactone Diol include Ingevity, Daicel, BASF, Shenzhen Esun Industrial, Juren Chemical Hitechnology, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises
