Research Summary

Polycaprolactone (PCL) is a biodegradable and biocompatible polyester with a wide range of applications. It is synthesized through the ring-opening polymerization of ϵ -caprolactone monomers. PCL is characterized by its low melting point, flexibility, and slow biodegradation rate, making it suitable for use in various medical, pharmaceutical, and industrial applications. In the medical field, PCL is often used in the production of biodegradable sutures, drug delivery systems, and tissue engineering scaffolds due to its compatibility with living tissues. Its ease of processing, thermoplastic nature, and ability to blend with other polymers further contribute to its versatility in manufacturing processes. Additionally, PCL has found applications in 3D printing and as a component in blends and alloys to enhance the properties of other polymers, showcasing its adaptability and usefulness in diverse industries.
