### Research Summary

Polycarbonate diol is a type of polyester diol with a molecular structure that includes carbonate linkages. It is produced through the reaction of carbon dioxide with epoxides, resulting in a polymer with hydroxyl end-groups. Polycarbonate diol is known for its unique combination of properties, including high flexibility, chemical resistance, and excellent weathering characteristics. This diol is commonly used as a building block in the synthesis of polyurethanes, providing enhanced flexibility and resilience to the final polymer. Its use is prevalent in the production of coatings, adhesives, sealants, and elastomers, where the specific requirements involve a balance between mechanical performance and durability. Polycarbonate diol contributes to the creation of materials with improved impact resistance and longevity, making it valuable in various applications across industries such as automotive, construction, and electronics.

The major global manufacturers of Polycarbonate Diol include UBE Chemical, Tosoh, Covestro, Asahi Kasei, Perstorp, Caffaro Industrie, Cromogenia-UnitsKurarayJiangsu Chemical Research, etc. The global players competition landscape in this report is
