Research Summary

Polycarbonate polyol is a type of specialty polyol used in the production of polyurethane polymers. It is characterized by its molecular structure, which contains carbonate linkages. The synthesis of polycarbonate polyol typically involves the reaction of cyclic carbonates with multifunctional initiators, resulting in a polymer with hydroxyl end-groups. This polyol is known for its unique combination of properties, including high flexibility, low temperature flexibility, and resistance to hydrolysis. Polycarbonate polyol is often used as a building block in formulating polyurethane elastomers, coatings, adhesives, and sealants. Its incorporation enhances the material's durability, impact resistance, and weathering characteristics, making it suitable for applications in automotive, construction, and industrial settings where flexible and resilient materials are required.

The major global manufacturers of Polycarbonate Polyol include UBE Chemical, Tosoh, Covestro, Asahi Kasei, Perstorp, Caffaro Industrie, Cromogenia-Units, Kuraray, Jiangsu Chemical Research, etc. The global players competition landscape in this report is
