Research Summary

Polydextrose is a water-soluble, low-calorie, and low-glycemic carbohydrate polymer that is commonly used as a food ingredient and dietary fiber supplement. It is created through the polymerization of dextrose (glucose) and sorbitol, resulting in a complex structure that the human body digests partially. Polydextrose has a sweet taste but is not metabolized like typical sugars, making it a suitable option for sugar reduction in various food products. It is often employed to enhance the fiber content, texture, and mouthfeel of foods while contributing minimal calories. Polydextrose is utilized in the production of sugar-free and low-calorie foods, such as baked goods, confectionery, and beverages, where it can improve the nutritional profile without compromising taste or texture. Additionally, its prebiotic properties may have potential health benefits by promoting the growth of beneficial gut bacteria.

The major global manufacturers of Polydextrose include Tate & Lyle, Henan Tailijie Biotech, Shandong Minqiang Biotechnology, Baolingbao Biology, Shandong Bailong Chuangyuan Bio-Tech, etc. The global players competition landscape in this report is
