Research Summary

Polydicyclopentadiene (PDCPD) is a thermosetting polymer derived from the ring-opening metathesis polymerization (ROMP) of dicyclopentadiene (DCPD). It is known for its exceptional toughness, impact resistance, and resistance to corrosion and chemicals. PDCPD has a unique combination of properties, including high strength-to-weight ratio, dimensional stability, and the ability to be molded into complex shapes. This makes it suitable for a variety of applications, especially in industries such as automotive, marine, and construction. PDCPD is commonly used in the production of large, structural components such as bumpers, body panels, and enclosures, where its durability and lightweight characteristics are advantageous. The polymerization process allows for the molding of PDCPD into intricate and large parts, offering design flexibility and cost-effectiveness in the manufacturing of robust and corrosion-resistant components.

The major global manufacturers of Polydicyclopentadiene (PDCPD) include Metton (Sojitz), RIMTEC (Zeon), Materia, Inc, Dacheng Pudao Materials, etc. The global

players competition landscape in this report is divided into three tiers.
