### Research Summary

Polyester fiber refers to a synthetic textile fiber made from polymerized ester monomers, commonly polyethylene terephthalate (PET). It is produced through a process called melt spinning, where the polyester polymer is melted and extruded through spinnerets to form long, continuous fibers. Polyester fibers are known for their versatility, durability, and resistance to wrinkles, shrinking, and fading. They are widely used in the textile industry for the production of fabrics and clothing, offering a range of characteristics from soft and lightweight to strong and durable. Polyester fibers are often blended with other fibers like cotton to create materials that combine the advantages of both. Additionally, their use in non-textile applications includes manufacturing ropes, seat belts, and various industrial products. The popularity of polyester fiber is attributed to its cost-effectiveness, ease of care, and adaptability to different applications in both apparel and industrial settings.

The major global manufacturers of Polyester Fiber include Tongkun Group, Reliance, Zhejiang Hengyi Group, Shenghong, Xin Feng Ming Group, Hengli Group, Billion
