Research Summary

Polyester filament yarn is a type of synthetic yarn made from continuous strands of polyester fibers. It is produced through a process called filament yarn spinning, where the molten polyester polymer is extruded through spinnerets to form long, continuous filaments. These filaments are then twisted together to create yarns of various thicknesses and characteristics. Polyester filament yarns are known for their strength, durability, and resistance to wrinkles and abrasion. They are widely used in the textile industry for weaving and knitting to produce a variety of fabrics for apparel, home furnishings, and industrial applications. The continuous nature of the filaments imparts a smooth and lustrous finish to the yarn, contributing to the quality and appearance of the final textile products. Polyester filament yarns come in different types, including fully drawn yarn (FDY), partially oriented yarn (POY), and drawn textured yarn (DTY), each suitable for specific applications based on their properties and production processes.

The major global manufacturers of Polyester Filament Yarn include Tongkun Group, Xin Feng Ming Group, Zhejiang Hengyi Group, Reliance, Shenghong, Hengli Group, Billion
